Job Summary:

A Senior Tooling Technician is regarded as someone who can fault-find on equipment but also plan and to some degree manage technical activities. In many cases the Senior Tooling Technician will be required to assist the Tooling Supervisor on some managerial activities – for instance acting as a "Night Shift Supervisor".

The Senior Tooling Technician is expected to coach colleagues in all aspects of subsea operations and maintenance.

In practice there is some overlap between the Senior Tooling Technician and Supervisor grades. It is not the intention of this programme to limit the technical activities undertaken by a Senior Tooling Technician when they are clearly capable of undertaking some of the responsibilities of the Supervisor grade, with the consent of the Tooling Supervisor or Assessor.

Entry Level Specifications:

- Valid and current offshore medical certificate that is acceptable in the region of the world in which they are employed
- Valid and current offshore survival certificate that is acceptable in the region of the world in which they are employed
- 360days offshore experience at Tooling Technician Grade I
- Minimum 36 months in the industry

Competencies:

- 1) The ability to co-ordinate activities in a safe manner
- 2) The ability to co-ordinate emergency response activities
- 3) Can demonstrate leadership skills
- 4) The ability to implement and manage maintenance activities
- 5) The ability to carry out and co-ordinate fault-finding activities on tooling systems
- 6) The ability to install, maintain and calibrate tooling equipment used in ROV operations
- 7) The ability to oversee all routine administrative requirements during subsea operations and maintenance activities
